

Carisurg

Assignment 9

Interim Submission

Due Date: June 12th, 2025.

Prepared by **Josiah-John Green**

Github Structure & Documentation.

My [github repository](#) is organised by Week, with the sub-folders containing assignments 01 and onward.

Throughout this programme, I hope to build a digital triage capture tool grounded in the operational realities of Caribbean emergency departments — resource-constrained, paper-based, and underrepresented in existing clinical AI research. The immediate goal is producing a clean, structured dataset from real ED encounters. The longer-term vision is using that data to develop an AI-assisted ESI classifier that supports, rather than replaces, clinical judgement at triage. My GitHub repository will serve as a live record of that progression.
